Clean water blocked across the country

Court suspends protections we helped win

For more than a decade, loopholes in the Clean Water Act left streams that flow into many of the waterways we love and rely on in New Jersey and across the country vulnerable to pollution.

More than 800,000 of you took action with Environment New Jersey to close these loopholes in the Clean Water Act—and President Obama’s Clean Water Rule, released in August, did just that, restoring protections to 2 million miles of streams and the drinking water sources for 1 in 3 Americans.

But now, the historic clean water protections that you helped win have been suspended nationwide, and could be overturned, due to lawsuits brought by polluters, with the support of more than 20 attorneys general across the country.

Polluters attack rule in court

Within hours of the Clean Water Rule’s September release, the Environmental Protection Agency (EPA) was hit with a flood of lawsuits from giant corporate polluters, who were joined, within weeks, by state attorney generals. In October, a U.S. Appeals Court suspended the rule nationwide, and may vote to overturn it.

“For more than a decade, the courts left thousands of our streams and wetlands in a precarious legal limbo, vulnerable to pollution and development,” said John Rumpler, senior attorney for Environment New Jersey. “Now they’ve done it again.”

Your support helps us respond

We can’t allow our country to go backwards on clean water. So in 2016, we’re doubling down on our efforts to protect this critical rule.

With you behind us, Environment New Jersey will urge attorneys general to intervene on the right side of the litigation. We’re also organizing legal scholars to speak up about the legal soundness of the Clean Water Rule. At the same time, we’re keeping the pressure on our leaders in Congress to beat back polluters’ attempts to pass legislation weakening the rule.

Most importantly, you’re helping us keep the debate focused on what this issue is really about: clean water for our families.

take action

We need your help to move forward on clean water. Take action online to urge our attorneys general to stand up for the Clean Water Rule:

Algae blooms, like this one on Lake Erie, are worsened by runoff pollution in streams.
We won! President Obama rejects Keystone XL

Your support won a monumental victory this November when President Obama rejected the construction of the Keystone XL pipeline—a pipeline designed to transport tar sands from Canada across the United States. Together, Environment New Jersey and our members fought alongside our allies for years against this project, which State Department officials estimated would produce 26 million metric tons of carbon pollution each year—the equivalent of 5.7 million cars.

“The Keystone XL pipeline would slam the accelerator on global warming, so we’re thrilled that President Obama is applying the brakes,” said Anna Aurilio, director of our Global Warming Solutions program. “The victory belongs to all the Americans who have been fighting for years for their water, their communities, and their kids’ future, and it’s a crucial step toward the 100 percent clean energy future the climate crisis demands.”

Stop the Exxon sell-out settlement

Environment New Jersey, together with six other environmental groups, is working to block Gov. Chris Christie’s $225 million settlement with ExxonMobil, which essentially lets the major oil company off the hook for generations of toxic pollution at its Bayonne and Linden refineries, 16 other Exxon sites across New Jersey and more than 800 gas stations.

“The Christie administration’s disregard of a generation of pollution at hundreds of Exxon facilities across the state is a slap in the face to New Jersey,” said Doug O’Malley, director of Environment New Jersey. “Exxon has created a legacy of pollution and public health risks in our state, and Gov. Christie should not let them off the hook.”

Unfortunately, a judge ruled in October that we couldn’t intervene in the settlement. So, with the backing of you, our citizen members, we’re appealing the ruling and working to hold Exxon accountable for their pollution—and the estimated $8.9 billion it could cost to clean it up.
Who’s standing in the way of you going solar?

Solar energy is booming across the country. In just the last three years, America’s solar photovoltaic capacity tripled, largely driven by just 10 states, according to recent research by Environment New Jersey Research & Policy Center.

Yet, as solar grows and generates increasing amounts of clean energy at increasingly affordable prices, electric utilities, fossil fuel interests and powerful industry front groups have begun chipping away at the key policies that have put solar energy on the map in the United States—often in the face of strong objections from a supportive public.

Leading states have strong policies

Environment New Jersey Research & Policy Center’s annual report “Lighting the Way,” released for the third time in September, found that solar’s recent and growing success is due not to the nation’s solar potential but rather to policies that have allowed increasing numbers of homeowners, businesses, communities and utilities to “go solar.”

Of the top 10 states in the report for solar capacity per capita—Hawaii, Arizona, Nevada, California, New Jersey, New Mexico, Vermont, Massachusetts, North Carolina and Colorado—all have renewable energy requirements and nine have laws that allow solar customers to connect to the electrical grid, or earn credit for excess electricity sent back to the grid. These 10 states are responsible for 86 percent of today’s solar electricity capacity.

Special interests stand in the way

The continued success of solar power, however, has been threatened by recent attacks on key solar policies. Environment New Jersey Research & Policy Center’s report, “Blocking the Sun,” released in October, documented 12 fossil-fuel-backed groups and electric utilities that are running some of the most aggressive campaigns to slow the growth of solar energy in the United States.

These campaigns are often waged in the dark, with industry-funded think tanks providing model legislation and political cover that allow in-state electric utilities to attack key solar energy policies.

In mid-2015, at least 21 states had either ongoing or recently resolved proceedings around policies to slow the growth of solar energy.

“By wide margins, Americans support pro-solar policies,” said Bret Fanshaw, Environment New Jersey Research & Policy Center solar program coordinator. “That’s why fossil fuel interests and their front groups have resorted to shady and deceptive tactics to undermine them. Ultimately, it’s up to state leaders to reject these attacks and support a clean energy future.”

Our research recommends that state decision-makers resist utility and fossil fuel industry influence by rejecting policies that place restrictions or tariffs on solar or rollback renewable electricity standards. In addition, state leaders can do more to encourage solar energy’s growth by embracing ambitious goals for solar energy and adopting policies that will help meet them.

Help us keep pipelines out of New Jersey

New Jersey is home to amazing rivers, wetlands and dozens of endangered species, but the oil and gas industry is disregarding our natural heritage in their haste to build pipelines through the state—including through protected wilderness.

Thanks to you, our members are giving Environment New Jersey vital support as we lead the charge to oppose South Jersey Gas’s proposed pipeline through Pinelands National Reserve, which was approved despite objections of many Pinelands Commission members. You’re helping us challenge the decision legally, and through the court of public opinion.

The proposed pipeline route crosses through 22 miles of the Pinelands and southern New Jersey, threatening irreparable damage to the Pinelands. We’re doing all we can to stop this plan from coming to fruition, and will continue to lead the opposition to other pipeline projects in New Jersey.

Garden State, not pipeline state

Support our efforts to keep pipelines out of New Jersey. Donate online at: www.EnvironmentNewJersey.org.

The Pinelands in southern New Jersey are threatened by pipeline construction.
